

# Retail Redevelopment

ROWE's experienced site civil engineers and landscape architects can:

- Improve traffic flow and parking
- Redesign/enhance site landscaping
- Enhance entryway and way finding signage
- Design improved and more economical site lighting
- Develop traffic calming measures
- Increase walkability
- Resolve drainage problems

ROWE Professional Services Company understands today's economic climate has made developing new retail centers increasingly difficult. This leaves the majority of center owners with maximizing return on their older existing centers.

From concept renderings to construction oversight, ROWE's professionals follow projects through every step of the process to ensure it is completed in an efficient and timely manner. We are a team player working with architects and other design team members to develop a comprehensive plan that rejuvenates their existing retail center.
